AB The invention relates to coryneform bacteria which have, in addn. to at least one copy, present at the natural site (locus), of an open reading frame (ORF), gene or allele which codes for the synthesis of a protein or an RNA. In each case a second, optionally third or fourth copy of this open reading frame (ORF), gene or allele at in each case a second, optionally third or fourth site in a form integrated into the chromosome and processes for the prepn. of chem. compds. by fermn. of these bacteria. The nucleotide and protein sequence of Corynebacterium aspartate kinase gene lysC allele is presented. The invention provides a process for the prepn. of L-lysine by fermn.

AB The invention relates to the ptsH gene of Corynebacterium glutamicum coding for component H of the phosphotransferase system. Also provided is a process for the fermentative prodn. of L-amino acids with enhancement of the ptsH gene and the use of the above polynucleotides as primer or hybridization probe. In another embodiment, mutants of the ptsH gene are

provided.

AB The ptsI gene of Corynebacterium glutamicum ATCC13032 encoding **phosphotransferase system** enzyme I is cloned for use in increasing the efficiency of fermn. of L-lysine by **coryneform bacteria**. Methods and culture media for fermentative prepn. of L-lysine with recombinant bacterial strains transformed with these vectors are also provided. Enhancement of the ptsI gene expression by ptsI shuttle vector could increase the yield of L-lysine in a Corynebacterium host. The fermentatively prepd. L-lysine are useful in pharmaceutical industry and foodstuff industry and very particularly in animal nutrition.

AB The **ptsH** gene of *Corynebacterium glutamicum* ATCC13032 encoding **component H** of the **phosphotransferase system** is cloned and characterized for use in increasing the efficiency of fermn. of lysine by **coryneform bacteria**. The gene was identified by querying a *C. glutamicum* sequence database for homologs of known **ptsH** genes. Disruption of the gene increased the yield of lysine in a *Corynebacterium* host from 9.54 g lysine/L at 13.1 OD660 to 12.29 g lysine/L at 12.7 OD660.
